APPLICATION

KACAB volume dampers series are designed to provide superior air control with high performance and heavy duty construction. KACAB 10 or 20 Dampers are specifically designed for manual balancing applications. They are suitable for use in the majority of commercial medium to high pressure and velocity HVAC systems.

They are designed and built to provide a cost effective and reliable dampers for reduced volume control and not positive shut-off.

DETAILS

Multi-Section Assembly

Damper larger than maximum single section size, will be made up of multiple equal section sections to be assembled at site (as standard) by sheet metal screw or #10 bolts & nuts with hand-quadrant on each side of the damper.

Damper can be factory assembled with single side hand-quadrant as optional with limited assembly of 2 sections --limitation is required to avoid damage during transportation-- unless assembled with factory mounted sleeve.

PERFORMANCE DATA

AMCA Test Figures

Figure 5.3 Illustrates a fully ducted damper. This configuration has the lowest pressure drop of the test configurations because entrance and exit losses are minimized by straight duct runs upstream and downstream of the damper.
